The information in red box is outdated

Incorrect knowledge snippet: Set titles in the ActionBar using `getSupportActionBar()`, and ensure synchronization between ActionBar and any custom Toolbars.

API: ActionBar

Knowledge type: Pattern

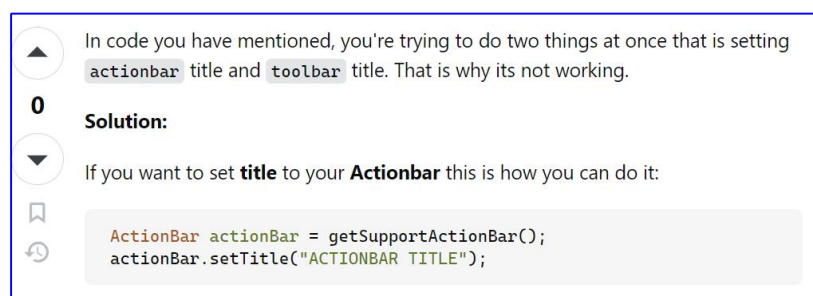

Error came from: GPT-4-o

Explanation: The post shows that the function to set title of the ActionBar is the `setTitle()`. `getSupportActionBar()` only returns an instance of ActionBar.

Screenshot of post:

setTitle() is used to set title of ActionBar

Incorrect knowledge snippet: Their generation does not require system coordination, enhancing

performance where distributed systems are involved.

API: UUID

Knowledge type: Pattern

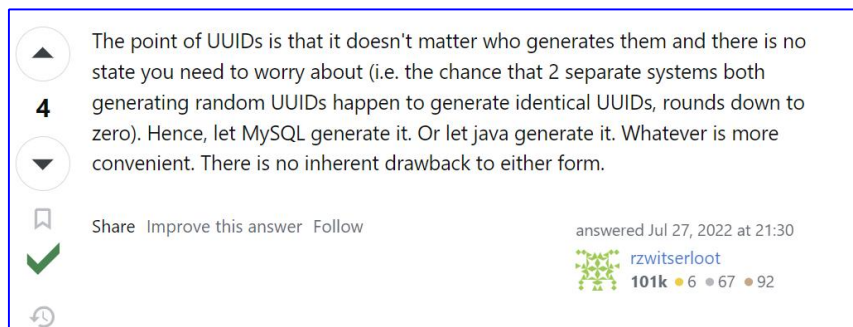

Error came from: SO post

Explanation: UUID version 1 is generated using the MAC address and timestamp. Therefore, it is not safe to state this generation does not require any system coordination without mentioning the exception of UUID version 1 or the risk of UUID duplication (although very unlikely).

Screenshot of post:

Not necessarily true for UUID version 1

Incorrect knowledge snippet: Although `IllegalArgumentException` is commonly used for input validation, other conditional checks and exception types can be employed based on specific application needs. However, the `require` function remains a popular choice for its simplicity and direct integration with `IllegalArgumentException`.

API: `IllegalArgumentException`

Knowledge type: Alternative

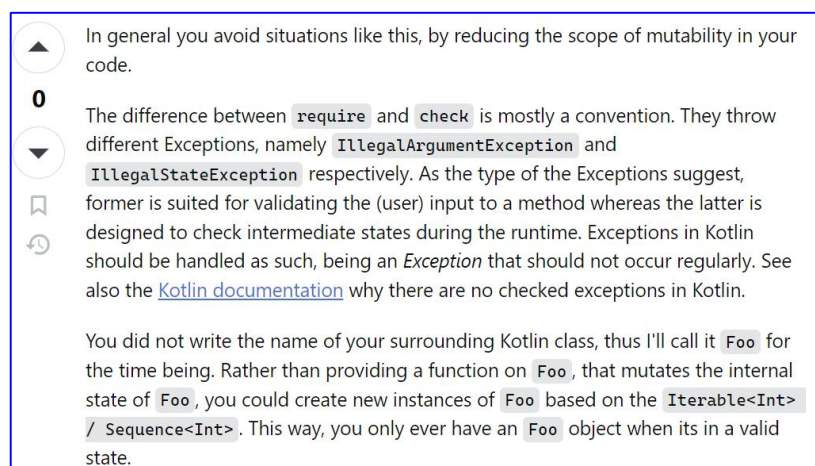

Error came from: DPR

Explanation: The post does not mention alternative to `IllegalArgumentException`.

Screenshot of post:

Not mentioning alternative to `IllegalArgumentException`

Incorrect knowledge snippet: When configuring hardware acceleration, set `android:hardwareAccelerated="true"` in both the application and activity tags if graphic performance enhancement is required throughout the app.

API: Manifest

Knowledge type: Directive

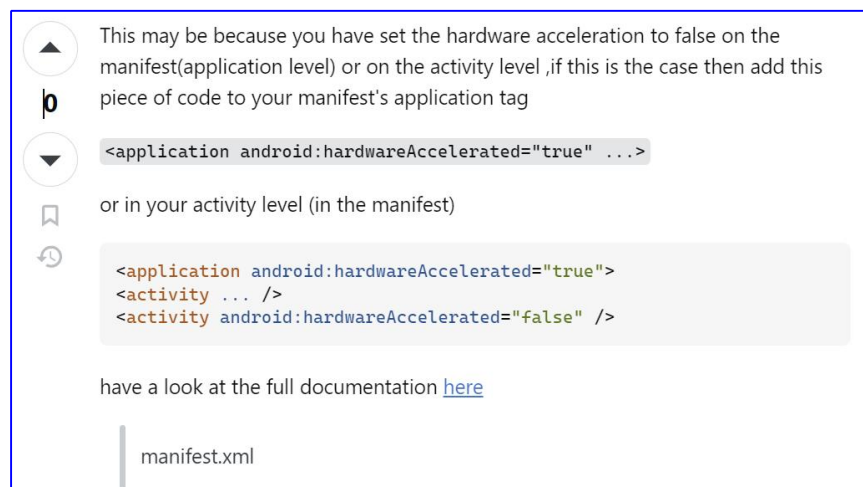

Error came from: GPT-4-o

Explanation: The post said the developer only needs to set one of application and activity tags.

The author explicitly said "or"

Incorrect knowledge snippet: Utilize `MediaController.getPlaybackState()` to verify the playback state, identifying which **MediaController** is currently active, either playing or buffering.

API: MediaPlayer

Knowledge type: Pattern

Error came from: DPR

Explanation: The post is about another API, namely MediaController.

Source post: [75930166](#)

Screenshot of post:

The post is not about MediaPlayer

Incorrect knowledge snippet: Iterate over multiple `MediaController` instances, comparing their `PlaybackState` `lastPositionUpdateTime` to ascertain the most recent active session and update the current media controller accordingly.

API: MediaPlayer

Knowledge type: Pattern

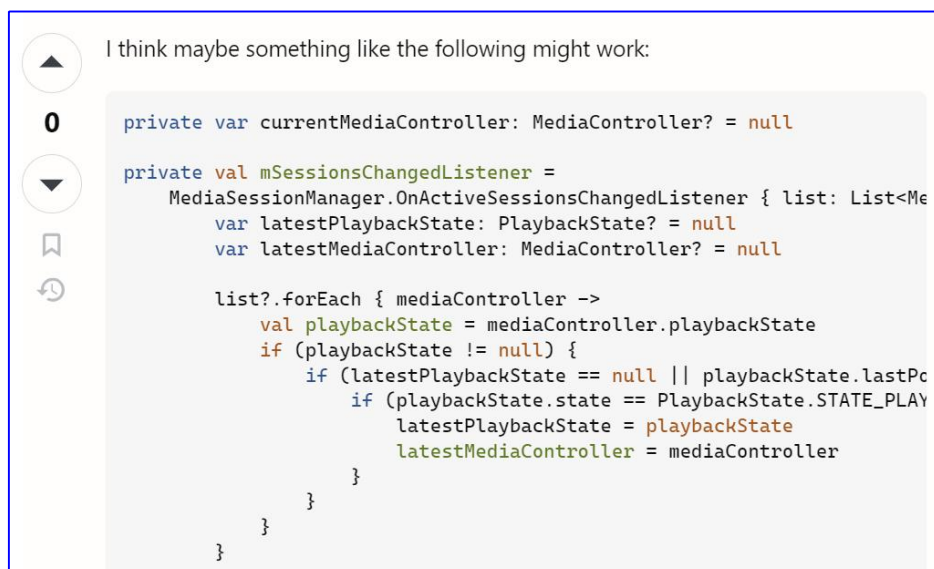

Error came from: DPR

Explanation: The post is about another API, namely MediaController.
